

LAPORAN PRAKTIKUM
WORKSHOP SISTEM INFORMASI WEB SERVER
(TIF330805)
SEMESTER III

Acara 10
Inheritance, Base Controller, Base model, Repository Pettern

NAMA :
ANGELLO ERIYA DEWANGGA (E41250776)

PROGRAM STUDI DILUAR KAMPUS UTAMA (PSDKU)
TEKNIK INFORMATIKA KAB. NGANJUK
JURUSAN TEKNOLOGI INFORMASI
POLITEKNIK NEGERI JEMBER
TAHUN 2026

```

<?php

abstract class BaseController
{
    protected function view(string $name, array $data = [], ?string
$layout = 'main'): void
    {
        extract($data);

        $viewFile = APP_PATH . '/Views/' . $name . '.php';

        if ($layout === null) {
            require $viewFile;
            return;
        }

        $view = $viewFile;
        require APP_PATH . '/Views/layouts/' . $layout . '.php';
    }

    // Arahkan ke URL lain (relatif terhadap BASE_URL) lalu hentikan
    eksekusi
    protected function redirect(string $path): void
    {
        header('Location: ' . BASE_URL . $path);
        exit;
    }

    // Simpan pesan flash untuk ditampilkan satu kali pada request
    berikutnya
    protected function flash(string $type, string $message): void
    {
        $_SESSION['flash'] = ['type' => $type, 'message' =>
$message];
    }
}

```

1. Membuat BaseController yang berisi method view() dan redirect().

```

<?php

class MahasiswaController extends BaseController
{
    private MahasiswaRepository $repo;

```

```

private ProdiRepository $prodiRepo;

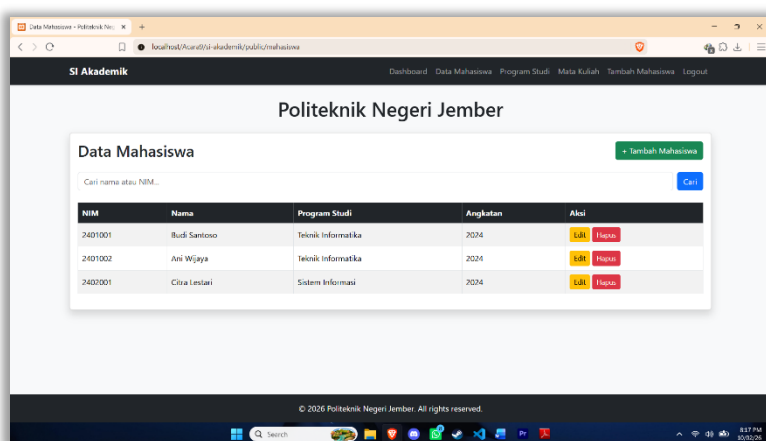

// Dependency di-inject Lewat constructor (controller tidak
membuat koneksi database sendiri)
public function __construct(MahasiswaRepository $repo,
ProdiRepository $prodiRepo)
{
    $this->repo      = $repo;
    $this->prodiRepo = $prodiRepo;
}

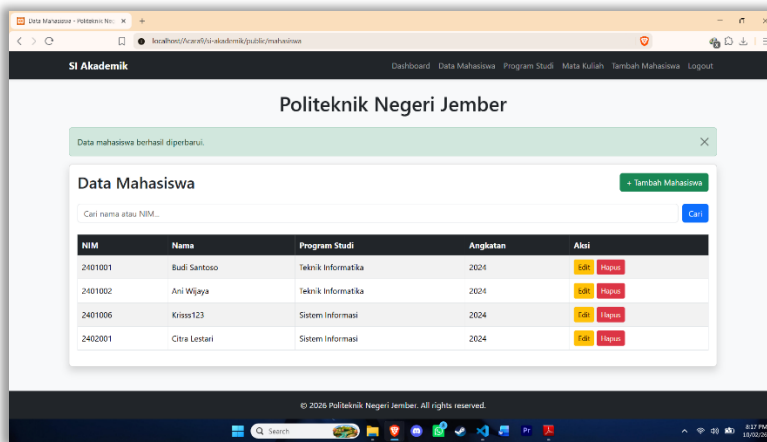

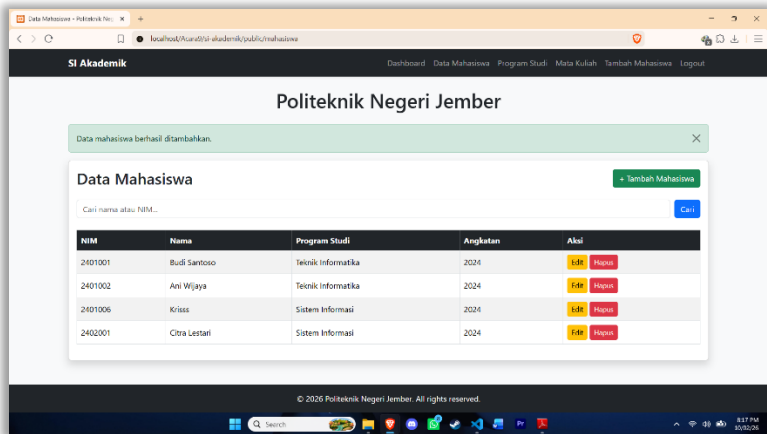

// Daftar + pencarian (?q=nama atau NIM)
public function index()
{
    $q = trim($_GET['q'] ?? '');

    $this->view('mahasiswa/index', [
        'title'      => 'Data Mahasiswa',
        'mahasiswa' => $this->repo->search($q),
        'q'          => $q,
    ]);
}

```

2. Membuat MahasiswaController yang mewarisi (extends) BaseController, Memodifikasi MahasiswaController agar seluruh proses akses data dilakukan melalui MahasiswaRepository,

- Memastikan proses tampil, tambah, ubah, dan hapus data tetap berjalan setelah proses refactoring.
